

# IT SERVICE MANAGEMENT PROCESS MANUAL

This document is a simplified version for technical portfolio demonstration purposes, focusing on strategic structure and alignment with COBIT, ISO, or ITIL frameworks.

**Company name:** CloudNova Logistics

**Type of Document:** IT Service Management  
Process Manual

**Reference Framework:** ITIL 4 (Information  
Technology Infrastructure Library)

## ● Objective

Standardize IT service delivery to ensure operational continuity of the logistics chain, minimizing disruptions and ensuring that technological changes are secure and controlled.

## ● IT Services Catalog

We have defined the main services offered to the business areas:

**User Support (Service Desk):** Single point of contact for incidents and requests.

**Tracking Platform Management:** Critical 24/7 availability.

**Cloud Infrastructure:** Provision of resources for the logistics system.

**Endpoint Security:** Antivirus and patch management on field devices.

## ● Incident Management and SLAs

To ensure agility, we have established Service Level Agreements (SLAs):

- **P1 (Critical):** Logistics system down. **Response:** 15 min | **Resolution:** 2 hours.
- **P2 (High):** Failure of shipping label printers. **Response:** 1 hour | **Resolution:** 4 hours.
- **P3 (Medium):** Request for new user in the system. **Response:** 4 hours | **Resolution:** 24 hours.

## ● Change Management (Enablement)

To avoid downtime caused by poorly planned updates:

- **Standard Changes:** Low risk, pre-approved (e.g., mouse replacement).
- **Normal Changes:** Require evaluation by the Change Assessment Board (CAB) and testing in an approval environment.
- **Emergency Changes:** Made to correct critical failures, with accelerated approval and post-implementation review.

## ● Key Performance Indicators (KPIs)

Operational efficiency is measured monthly through:

- **MTTR (Mean Time to Repair):** Average time spent resolving an incident.
- **SLA Compliance:** Percentage of calls resolved within the agreed timeframe.
- **FCR (First Call Resolution):** Rate of incidents resolved on first contact.
- **Change Success:** % of changes that did not cause incidents after implementation.

## ● Continuous Service Improvement (CSI)

Application of the ITIL model of “Continuous Improvement”: assessing where we are, where we want to go, and how we will get there through constant feedback cycles from logistics users.
